Body Contouring  
Facial Sculpting  
Skin Tightening

## Immediate and Visible Results for:

- Body Contouring
- Facial Sculpting
- Skin Tightening
- Fine Lines & Wrinkle Reduction
- Circumference Reduction
- Localized Fat Reduction

## When can I expect to see results?

Results are seen immediately in almost all patients after the very first treatment. Furthermore, the desired outcome can be seen over a single treatment course, including noticeably reduced fine lines and wrinkles, a tightening of saggy or lax skin, measurably smaller torsos and even an improvement in skin tone and texture.

## Have TriPollar treatments been clinically tested?

Yes. TriPollar treatments have been clinically proven to tighten and re-contour the skin on the face, neck, arms, and torso, leaving skin looking firmer and younger. Some clients can attain dramatic circumference reduction. Treatments are safe, gentle, and effective. Results may vary from person to person.

## How many treatments will I need?

A typical treatment course consists of 6-8 sessions, with each session lasting approximately 20 minutes (depending on the treatment area). The option of maintenance treatments (once every 4-8 weeks) is available to clients seeking prolonged and/or enhanced results. Long lasting results may vary.

## Will it hurt?

No. The TriPollar treatment is a non-invasive, gentle procedure. During treatment, a mild heating sensation can be felt. Immediately after the treatment, some redness and warmth can be seen and felt on the skin. However, both of these effects typically disappear within an hour or so following the treatment.

## Am I a candidate?

TriPollar treatments can provide an active solution for patients of all ages and skin types. It is a gentle and effective treatment that can be used on the face, neck, décolleté, hands, arms, tummy, thighs and buttocks.

## Will the treatment interrupt my daily routine?

No. TriPollar treatments are so gentle that you can return to your daily routing immediately after the completion of your session.

## How It Works

TriPollar RF energy safely penetrates the skin to selectively heat the fat cells and extra-cellular matrix (ECM) where collagen fibres are embedded (fig.1). Localized heating immediately shrinks the fat cells, contracts the collagen fibres and increases the metabolism of the fibroblasts, thereby accelerating the production of new collagen fibres. In turn, the skin tightens, creating a smoother, healthier and younger looking skin (fig. 2).

Fig. 1 - RF energy selectively heats the fat cells and collagen fibres under the skin.

Fig. 2 - After a full treatment, fat cells shrink and the skin tightens.
